

Which of the following items would you like more information or education?

AR or Anti-reflective clear coat lenses: *We recommend this to everyone!*

With regular lenses, up to 10% of light never gets through to your eyes. AR lenses let of up to 99% of light through, so you see more detail, sharper images, and everything more clearly. Have you ever seen halos around lights at night due to your glasses? Do the words on your computer screen begin to blur while you're working? If you answered yes, then the glare is impacting your vision. AR reduces eye fatigue caused by fluorescent lights, computer screens, headlights, taillights and even overhead lights. Also, when glare does not reflect off your lenses they appear virtually invisible. This allows you to look better aesthetically when others look at you.

Computer Lenses / Task Specific: *They are simply fantastic for near to mid-range tasks!*

These lenses, with AR, are prescribed especially when the work or speciality task you are involved in is focused mainly in front of you. They provide wider, more comfortable specialized vision. These lenses are an advantage over single vision distance or reading lenses too. Many of our happiest patients are adding these to their everyday eyewear (two pair total) in addition to general purpose eyewear.

Condensed Hi-Index Aspheric Lenses: *Safety and thin lenses in front of your eyes!*

These lenses are designed to be at least 30% thinner than regular plastic lenses and for ultra impact and safety. We recommend them for all impact sports and all children's eyewear. In fact, because they are shatter resistant they are the best solution for safety for everyone. Hi-index is available in aspheric photochromatic and polarized lenses with AR, providing you with clearer, sharper vision, thinner, lighter weight, inherently 100% UV A, B & C absorption, and exceptional comfort.

Polarized Sun Lenses: *You'll never want to be without them outdoors!*

These sun lenses functionally are two fold. They eliminate blinding and disabling glare from water, roadways, snow and shiny reflective surfaces as well as bring out all colors more vividly in the thing you're looking at. These lenses are the best solution for true outdoor performance driving, sports, water and leisure activities. Polarized sun lenses provide a 99% reflection protection factor and 100% UV A, B & C absorption, ensuring maximum protection for your eyes and thereby reducing the reducing the risk of retinal eye disease and cataracts.

Non Prescription Sunglasses: *Reduce eye health risks with our without contacts!*

Available polarized without prescription in any regular or sunglass style frame for sport or dress. Perfect over contact lenses, custom crafted with backside AR and 100% UV A, B & C absorption in the frame of your choice. These lenses will provide excellent vision without the potential distortion of color and field often associated with discount store sunwear.
